## SUMMARY

---

Ilias Fountoulakis (IF) studied physics at the Faculty of Science of the Aristotle University of Thessaloniki (AUTH), Greece, and got his BA degree in 2008. He got his MSc degree in environmental physics in 2011 at AUTH, and PhD diploma in atmospheric physics in 2016 at the Laboratory of Atmospheric Physics of the same university (LAP-AUTH) under the supervision of Prof. A Bais.

His main scientific interests are:

- Spectral solar radiation measurements and modelling
- Solar energy measurements and modelling
- Stratospheric ozone and solar UV radiation
- Ground- and satellite-based remote sensing of the atmospheric composition
- Aerosol radiative effects
- Climatological analysis of solar radiation, aerosol optical properties and atmospheric parameters on global and regional scales

From 2010 to 2017 IF worked as a researcher (as a post-graduate student in 2010 – 2011, PhD student in 2012 – 2016, post-doctoral researcher in 2017) at LAP-AUTH. His research at LAP-AUTH was mainly focused on the measurements and the climatological analysis of the levels of surface solar ultraviolet (UV) radiation and the atmospheric parameters that are mainly affecting it (i.e., clouds, total ozone and aerosols). Additionally, he investigated the past and future changes of the spectral solar UV radiation using radiative transfer modelling and projections from global climate models. In 2010 – 2017 he was responsible for the maintenance and the callibration of the two Brewer spectrophotometers operating at LAP-AUTH, and contributed to the maintenance, characterization and calibration of various radiometers and spectroradiometers. He also worked for a short time (September – December 2017) for the Atmospheric Observatory of Izaña, Tenerife, Spain and contributed to the writing of the online documentation of the European Brewer Network (EUBREWNET).

From 2018 to 2020 IF worked as a researcher for the Regional Agency for the Protection of Environment of the Aosta Valley, Italy (ARPA VdA). His research at ARPA VdA was again mainly focused on the measurements and the climatological analysis of the levels of surface solar UV radiation. Furthermore, he successfully setted up and initialized a new optical laboratory. In 2018 – 2019 IF also kept collaborating closely with LAP-AUTH performing research relative to the retrieval and the climatological analysis of the aerosol optical properties in Thessaloniki, Greece.

---

Since 2020, IF is a research associate at the Institute of Astronomy, Astrophysics, Space Applications and Remote Sensing (IAASARS) of the National Observatory of Athens (NOA) where his research is mainly focused on the measurements, modelling and climatological analysis of solar radiation and energy over Europe and the broader region of Eastern Mediterranean. Through his work at NOA IF has gained experience relative to the exploitation of satellite retrievals for the development of solar energy related applications. He also uses satellite and ground-based datasets for the quantification of the effects of different atmospheric parameters on the levels of solar radiation and energy, with special attention on the radiative effects of aerosols.

In October 2021 – September 2022 IF was a teaching fellow at the Department of Environmental Engineering of the University of Patras, Greece, teaching courses relative to atmospheric physics, air pollution and global climate.

Since January 2023 IF is an assistant researcher at the Research Centre for Atmospheric Physics and Climatology of the Academy of Athens (KEFAK), Greece. At KEFAK his research is focused on solar UV radiation and stratospheric ozone, aerosol optical properties and radiative effects, and the monitoring of atmospheric and soil parameters for climate change adaptation.

IF (Scopus author ID: 56568211800) has co-authored 40 papers (leading author at 12) published in peer-reviewed scientific journals which have received at least 479 citations (h index = 15). Four of the papers are published to journals with an impact factor larger than 10. He has also co-authored 22 conference papers and more than 90 abstracts in national and international conferences.

Since 2010 IF has participated in 18 national and international research projects. He has also participated in three field campaigns (related to measurements of spectral solar irradiance and/or columnar ozone), two international summer schools, and one short term scientific mission. He has been an active reviewer for more than 20 scientific journals.

Summarizing, in his research IF has incorporated and analyzed ground-based measurements, satellite retrievals, and datasets from global climate models. In addition to his analytical skills, through his work he has developed strong technical and computational skills. His research has contributed more significantly towards the following topics:

- Effects of past changes in climate and air quality on the levels of surface solar UV radiation, on regional and global scales
  - Potential effects of future climatic changes on the levels of surface spectral UV radiation and biologically effective UV doses.
  - Quantification of the impact of aerosols and clouds on the climatological levels of solar radiation and energy
  - Interactions between aerosols and spectral solar and terrestrial radiation
  - Determination and quantification of the uncertainties in radiometric and spectroradiometric measurements from ground-based sensors, and subsequent uncertainties in the products of their analysis (i.e., total ozone and aerosol optical properties)
  - Validation of satellite products
